Chapter *Page#*

1 ABSTRACT 9
2 INTRODUCTION 10
2.1 Executive summary 10
2.2 Literature Review 11
2.3 Project Goals 12
3 REQUIREMENTS DEFINITION 13
3.1 The Need for a Survey 13
3.2 Competitors 13
3.3 Legal 13
3.4 System Requirements Specification 14
3.4.1 Functional 14
3.4.2 Non-Functional 17
4 DETAILED DESIGN 18
4.1 Generic Guidelines 18
4.1.1 Design Process 18
4.1.2 Safety Standards (Association, 2012) 20
4.1.2.1 Compliance to the Canadian Safety Association (CSA) Standards 20
4.1.3 Generic Behaviour and Guidelines 21
4.1.4 UHC Hierarchy and Flow Diagram 22
4.1.5 Communications 22
4.1.5.1 Subsystem Communication 23
4.1.5.2 External Communication 24
4.1.5.2.1 Spark Core 24
4.1.6 Date and Time 24
4.1.7 Main Controller 25
4.2 Generic Implementation 25
4.2.1 Main Controller hardware (Including RFM73 communication) 25
4.2.1.1 Main Controller Enclosure 25
4.2.1.2 Main Controller Printed Circuit Board 26
4.2.1.3 Main Controller TFT Screen 27
4.2.2 Main Controller Testing 27
4.2.3 Main Controller Software 28
4.2.3.1 HVAC Software 28
4.2.3.2 RFM73 Communication Software 29
4.2.4 Spark core communication (UART) 30
4.3 Power Consumption Reduction and Control 31
4.3.1 Power Outlets Control and Monitoring 31
4.3.1.1 Electrical Code Specification 31
4.3.1.2 Independent Configuration 31
4.3.1.3 Control and Monitoring 31
4.3.1.4 Power Outlet Design 1 (Sedra/Smith, 2010) 31
4.3.1.5 Power Outlet Design 2 (Sedra/Smith, 2010) 32
4.3.1.6 Prototype and Test Procedure 33
4.3.1.7 Software 34
4.3.1.7.1 Cut Off Mode 35
4.3.1.7.2 Fail-Safe Mode 36
4.3.1.8 Subsystem Status and Initiate Subsystem Functions 36
4.3.2 Lightning Control and Monitoring 36
4.3.2.1 Electrical Code Specification 36
4.3.2.2 Independent Configuration 36

4.3.2.3 Control and Monitoring 36
4.3.2.4 Two Way Switch Design 37
4.3.2.5 Prototype and Test Procedure 37
4.3.2.6 Software 39
4.3.2.6.1 Fail-Safe Mode 39
4.3.2.6.2 Light on/off 40
4.3.2.7 Subsystem Status and Initiate Subsystem Functions 40
4.3.2.7.1 State Switch 40
4.3.3 Appliance Monitoring 40
4.3.3.1 Current Sensing Method and Safety 41
4.3.3.1.1 Basic Technique 41
4.3.3.1.2 Choosing the right sensor 41
4.3.3.1.3 Analysing expected values from the current sensor 42
4.3.3.2 Conditioning circuitry 42
4.3.3.3 Procedure 44
4.3.3.3.1 Scale Factor 44
4.3.3.3.2 Calibration 44
4.3.3.3.3 Process 45
4.3.3.4 Implementation 45
4.3.3.4.1 Hardware 45
4.3.3.4.2 Software 46
4.3.3.4.3 Test Simulation 47
4.3.3.4.4 Technical Difficulties 48
4.3.3.4.5 Integration 48
4.3.4 Power Source Control and Monitoring 49
4.3.4.1 Distribution Panel 49
4.3.4.2 Relay Panel as an Accessory to the Distribution Board within the Home 49
4.3.4.3 Protection Sequence 50
4.3.4.4 Components 50
4.3.4.5 Software Logic for Relay Control and Power Management 52
4.3.4.6 Relay Panel Hardware 53
4.3.4.6.1 Relay Panel Control Circuitry 53
4.3.4.6.2 Relay Panel Enclosure 54
4.3.4.7 Relay Panel Testing 55
4.3.4.7.1 Component testing with power supply disconnected 55
4.3.4.7.2 System testing with power supply connected 55
4.3.4.8 Relay Panel Software 56
4.3.4.8.1 RelayOn Command 57
4.3.4.8.2 RelayOff Command 57
4.3.4.8.3 Power Command 57
4.3.5 Temperature Monitoring and Heating AC System Control 57
4.3.5.1 Temperature Monitoring 57
4.3.5.1.1 Self-Heating due to Own Heat 58
4.3.5.1.2 Noise Filter 58
4.3.5.1.3 Small Signal Output Reading 58
4.3.5.2 UHC Central HVAC Connection 58
4.3.5.2.1 By Wire Connection 59
4.3.5.2.2 Wireless Connection 59
4.3.5.3 HVAC Subsystem Controller and Software 59
4.3.5.3.1 Micro Controlled Custom Logic I/O Relation (Dounis & Caraisco, 2009) 60
4.3.5.3.2 Delta Temperature 60
4.3.5.3.3 Actual Temperature 61
4.3.5.3.4 Rate of Change of Actual Temperature 61

4.3.5.3.5 HVAC Selection Mode 62
4.3.5.3.6 HVAC_Timer 62
4.3.5.3.7 Programmable Logic Control 62
4.3.5.3.8 Specific HVAC settings 64
4.3.5.3.9 Fail-Safe 65
4.3.5.4 HVAC Wireless Implementation 65
4.3.5.4.1 HVAC Wireless Hardware 65
4.3.5.4.2 HVAC Wireless Testing 65
4.3.5.4.3 HVAC Wireless software 66
4.4 Safety and Access 66
4.4.1 Door Locks Control and Monitoring 66
4.4.2 Having the Ability of Locking/Unlocking your Door from Anywhere 67
4.4.3 Giving Notifications of Lock/Unlock Status 67
4.4.4 Power Consumption and Control 67
4.4.5 Equipment Needed for the Design 68
4.4.5.1 Powerbolt 1000 68
4.4.5.1.1 Easy to Use 68
4.4.5.1.2 Easy to Program 68
4.4.5.1.3 Installation 68
4.4.6 Secondary Design for Door Lock 69
4.4.6.1 Circuit Design 70
4.4.6.2 Software component 70
4.4.6.3 Door Lock Hardware and Software Testing 70
4.4.6.4 Communication with the Main Controller 71
4.4.6.5 Technical difficulties 71
4.4.6.6 Fail safe mode 71
4.4.6.7 Future work 72
4.5 User Interface 73
4.5.1 Interfacing and Data Communication 73
4.5.2 Main Controller Interface 74
4.5.3 Web-Interface 75
4.5.3.1 Homepage 75
4.5.3.2 Sign Up Page 76
4.5.3.3 My Account Page 76
4.5.3.4 Backend Design 77
4.6 Demonstration and Power Distribution Plan 77
4.6.1 Power Distribution for the Simulation - Theoretically 77
4.6.2 Power Distribution for the Simulation Practically 78
4.6.3 Prototype and Challenge 79
RISK MANAGEMENT PLAN 79
5 DIVISION OF RESPONSIBILITIES 81
5.1 Milestones 81
5.2 Team qualification 81
5.3 Team execution 83
5.4 Schedule (Gantt Chart) 85
5.5 Bill of Material (BOM) 86
5.6 Conclusion 90
6 REFERENCES 91

TABLE OF APPENDICES

Appendix *Page#*

APPENDIX A **A-1**
A) Survey **A-2**
APPENDIX B **B-1**
B) UHC system and subsystem schematic **B-2**
1) Main Controller B-2
2) Power Outlet – Design 1 ..... B-4
3) Power Outlet – Design 2 ..... B-6
4) Switch - Design B-8
5) Appliance Monitoring B-11
6) Power Source Control and Monitoring – Single Pole Circuits B-12
7) Power Source Control and Monitoring – Double Pole Circuits B-13
8) UHC HVAC Control Wireless B-14
9) Deadbolt Lock B-15
10) UHC Implementation B-16
APPENDIX C **C-1**
C) Printed Circuit Board Design (Gerber) **C-2**
